Heather Taussig, Ph.D., is a Professor at the University of Denver's Graduate School of Social Work. She is also an Adjunct Professor at the Kempe Center for the Prevention and Treatment of Child Abuse and Neglect at the University of Colorado.

Dr. Taussig's research focuses on developing and testing prevention programming for maltreated children with child welfare involvement. She developed and directs the Fostering Healthy Futures (FHF) program, an evidence-based mentoring program for children in foster care that was developed and tested with funding from the National Institutes for Health. FHF is being disseminated through community-based organizations and a teen adaptation is being tested in a randomized controlled trial funded by the Laura and John Arnold Foundation. Dr. Taussig recently completed data collection for a 10-year longitudinal study of youth in foster care, funded by the National Institute of Justice, and she is beginning a study of ecological factors associated with juvenile justice involvement for youth in foster care through funding from the Office of Juvenile Justice and Delinquency Prevention. Dr. Taussig's work includes research on youth mentoring, adolescent risk behaviors, dating violence, and child welfare system outcomes.

Dr. Taussig currently serves on several review panels and community collaboratives as well as on the Research Board of the National Mentoring Resource Center. She served on Colorado Governor Ritter's Task Force on Foster Care and is an awardee for her work on child abuse and neglect from the International Society for the Prevention of Child Abuse and Neglect.
